Protein with stem cell inhibition activity, e.g. LD78 or MIP-1 alpha - unable to form stable multimer higher than dodecamer, alpha - unable to form stable multimer higher than dodecamer, broviding better tissue penetration.

Example 124; Page 94; 294pp; English.

Example 124; Page 94; 294pp; English.

Analogues of natural stem cell inhibitors, such as LD78 and MIP-1 alpha, having mutations to prevent or reduce multimer formation beyond certain stages (e.g. dodecamer), have improved solution properties leading to enhanced productivity and greater therapeutic utility as stem cell protective agents. The analogues may be used in tumour therapy, psoriasis or other diseases involving hyperpoliterative stem cells.

1- FUNCTION: CHEMOTACTIC FACTOR THAT ATTRACTYES, LYMPHOCYTES,
BASOPHILS AND EOSINOPHILS, BUT NOT NEUTROPHILS. SIGNALS THROUGH
CCR2B AND CCR3 RECEPTORS. PLAYS A ROLE IN THE ACCUMULATION OF
LEUKOCYTES AT BOTH SIDES OF ALLERGIC AND NONLLERGIC INFLAMMATION.
MAY BE INVOLVED IN THE RECRUITMENT OF MONOCYTES INTO THE ARTERIAL
WALL DURING THE DISEASE PROCESS OF ARTHEROSCIEROSIS. MAY PLAY A
ROLE IN THE MONOCYTE ATTRACTION IN TISSUES CHRONICALLY EXPOSED TO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         01-JAN-1990 (REL. 13, CREATED)

"Cloning, sequencing, expression and inflammatory activity in skin of ovine interleukin.8"."
"LIMMUND. CELL BIOL. 72:398-405(1994).
-! FUNCTION: IL-8 IS A CHEMOTACTIC FACTOR THAT ATTRACTS NEUTROPHILS, BASOPHILS, AND T-CELLS, BUT NOT MONCOYTES. IT IS ALSO INVOLVED IN NEUTROPHIL ACTIVATION. IT IS RELEASED FROM SEVERAL CELL TYPES IN RESPONSE TO AN INFLAMMATORY STIMULUS.
-! SOBUNIT: HOMODIMER.
-! SIMILARITY: BELONGS TO THE INTERCRINE ALPHA FAMILY (SWALL CYTOKINE CXC). (CHEMOKINE CXC).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                IL8_PIG STANDARD; PRT; 103 AA.

-1- FUNCTION: IL-8 ISA CHEMOTACTIC FACTOR THAT ATTRACTS NEUTROPHILS,
BASOPHILS, AND T-CELLS, BUT NOT MONOCYTES. IT IS ALSO INVOLVED IN
NEUTROPHIL ACTIVATION. IT IS RELEASED FROM SEVERAL CELL TYPES IN
RESPONSE TO AN INFLAMMATORY STIMULUS.

I IDOCHEM. BIOPHYS. RES. COMMUN. 220:945-948(1996).

- !- FUNCTION: MONOKINE WITH INFLAMMATORY AND CHEMORINETIC PROPERTIES.
C HAGOTACTIC ACTIVITY FOR MONOCYTES, NEUTROPHILS, ESGINOPHILS, BASOPHILS, AND LYMPHOCYTES. REQUIRED FOR LUNG TNF-ALPHA PRODUCTION, NEUTROPHIL RECRUITMENT AND SUBSEQUENT LUNG INJURY AND MAY FUNCTION AS AN AUTOCRINE MEDIATOR FOR THE MACROPHAGE
PRODUCTION OF TNF-ALPHA WHICH IN TURN UP-REGULATES VASCULAR
PRODUCTION MOLECULES REQUIRED FOR NEUTROPHIL INFLUX. THIS PROTEIN
                                                                                                                                                                                                                                                                                                                                                                  BINDS HEPARIN.
--- INDOCTION: BY LIPOPOLYSACCHARIDE (LPS).
--- SIMILARITY: BELONGS TO THE INTERCRINE BETA FAMILY (SMALL CYTOKINE C-C) (CHEMOKINE CC).

    Well Wall Just 19984/10.

Why wall your search of the chemokine MCP-4 receptor - for identifying agonists or antagonists which can be used for treating e.g. infections, allergic and asthmatic reactions, atherosclerosis and arthritis

Disclosure; Fig 2; 25pp; English.

CC This is the chemokine MCP-4 sequence that can be used in screening compends for identifying MCP-4 receptor antagonists and agonists. MCP-4 receptor and agonists. MCP-4 receptor and agonists can be identified by contacting a compound with MCP-4 receptor and agonists can be identified with the receptor. MCP-4 receptor in compination and is used in the form of the isolated protein. It is receptor is expressed on the surface of a host cell or in a membrane comprising a nucleic acid sequence encoding the MCP-4 receptor, and colluring the cell line in a culture medium. Susceptibility to disease states associated with abnormal expression of the MCP-4 receptor can be identified using MCP-4, MCP-4 and/Or MCP-3 in a sample taken culturing the level of MCP-4 and/Or MCP-3 in a sample taken from a patient. Neutralising antibodies to the MCP-4 receptor can be identified using MCP-4, MCP-3, RANTES, MCP-1 or ectaxin. The contaction and antagonists identified can be used for treating disease contacts associated with the MCP-4 and/Or MCP-3 in a sample taken contaction and artigonists identified can be used for treating disease contactions, and advanced in the MCP-4 receptor, e.g. inflammatory states associated with the MCP-4 receptor, e.g. inflammatory states associated with the MCP-6 receptor, e.g. inflammatory states associated with the MCP-

Example 11; Fig 5; 83pp; English.

The present sequence is human chemokine betal0 (Ck betal0) or monocyte chemotactic protein 4 (MoP-4) Bac 3 variant, which can be used to treat betal0 as a variant, which can be tagonist can be used to treat leukaemia, solid tumours, chronic or opportunistic infections, autoimmune diseases, asthma, fibrotic diseases, psoriasis and neurodegenerative diseases. It also promotes wound healing, requilates haematopoiesis and generates antibodies. Labelled Ck betal0 can be used to identify its cognate receptor, while cells expressing the receptor can be used to screen compounds for (ant)agonist activity. The antagonist can be used to treat rheumatoid arthritis, autoimmune, chronic inflammatory or infectious diseases, allerdies, prostaglandin dependent fever and infectious diseases, allerdies, prostaglandin dependent fever and be used to isolate genes encoding similar peptides, in gene therapy and for chromosome identification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps

Polypeptide encoding chemokine beta 4 and monocyte chemotactic protein 4 - useful to treat tumours, autoimmune disease, infection, asthma and fibrosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Polypeptide encoding chemokine beta 4 and monocyte chemotactic protein 4 - useful to treat tumours, autoimmune disease, infection, asthma and fibrosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Example 11, Fig. 51, 83pp; English.

The present sequence is human chemokine betal0 (Ck betal0) or monocyte chemotextic protein 4 (MCP-4) Bac 2 variant, which can be used to treat patients deficient in Ck betal0, while a Ck betal0 antagonist can be used to reduce excessive levels of Ck betal0. Ck
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                19-MAR-1998 (first entry)
Bac 2 chemokine betal0 or monocyte chemotactic protein 4 variant.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     0;

The present sequence is human chemokine betal0 (Ck betal0) or monocyte chemotactic protein 4 (MCP-4) Droil/2 variant, which can be used to treat patients deficient in Ck betal0, while a ck betal0 antagonist can be used to reduce excessive levels of Ck betal0. Ck betal0 can be used to treat leukaemia, solid tumours, chronic or opportunistic infections, autoimmune diseases. It also promotes wound healing, regulates haematopoiesis and generates c antibodies. Labelled Ck betal0 can be used to creat leukaemia, solid tumours, chronic or diseases, psoriasis and neurodegenerative diseases. It also promotes wound healing, regulates haematopoiesis and generates c antibodies. Labelled Ck betal0 can be used to identify its cognate receptor, while cells expressing the receptor can be used to screen compounds for (ant)agonist activity. The antagonist can be used to creen creat rheumatoid arthritis, autoimmune, chronic inflammatory or infectious diseases, allergies, prostaglandin dependent fever and bone marrow failure, silicosis, sarcoidosis, hyper-eosinophilic compounds. Lung inflammation and atherosclerosis Ck betal0 cDNA can
                                                                     promotes wound healing, regulates haematopoiesis and generates antibodies. Labelled Ck betal0 can be used to identify its cognate receptor, while cells expressing the receptor can be used to screen compounds for (ant)agonist activity. The antagonist can be used to treat rheumatoid arthritis, autoimmune, chronic inflammatory or infectious diseases, allergies, prostaglandin dependent fever and bone marrow failure, silicosis, sarcoidosis, hyper-eosinophilic be used to isolate genes encoding similar peptides, in gene therapy and for chromosome identification.
                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Droll/2 chemokine betall or monocyte chemotactic protein 4 variant. Human; chemokine betall; ck betall; treatment; antagonist; solid tumour; infection; autoimmune disease; asthma; antibody; fibrotic disease; psoriasis; neurodegenerative disease; wound healing; heematopoiesis regulation; gene therapy; chromosome identification; monocyte chemotactic protein 4; leukaemia; MCP-4; Droll/2 variant.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    protein 4 - useful to treat tumours, autoimmune disease, infection,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        used to isolate genes encoding similar peptides, in gene therapy
betal0 can be used to treat leukaemia, solid tumours, chronic or opportunistic infections, autoimmune diseases, asthma, fibrotic diseases, psoriasis and neurodegenerative diseases. It also

Bac 1 chemokine betal0 or monocyte chemotactic protein 4 variant.
Bac 1 chemokine betal0 or monocyte chemotactic protein 4 variant.
Human; chemokine betal0, Ck betal0; treatment; antagonist;
solid tumour; infection; autoimmune disease; asthma; antibody;
fibrotic disease; psoriasis; neurodegenerative disease;
wound healing; haematopoiesis regulation; gene therapy;
chromosome identification; monocyte chemotactic protein 4;
leukaemia; MCP-4; Bac 1 variant.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Ten new chemokine(s) able to mobilise stem cells - used where increased levels of haematopoietic cells are required, e.g. to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö

Monocyte Chemoattractant proteins, MCP-4 and MCP-3 - used to develop products for treating e.g. cancers, infections, asthma, cystic fibroats, rinhitis, atheroscalerosis or inflammatory bowel disease claim 8; Page 53; 106pp; English.

The present sequence represents human monocyte chemoattractant protein 4 (MCP-4). The MCP-5 have activity in stimulating chemotactic cartivity. The proteins can be used for treating cancers, e.g. a lymphoma (e.g. Hodgkin's lymphoma), a plasmacytoma, a melanoma, a cartivity. The proteins can be used for treating cancers, e.g. a sarcoma, a tumour within the lung or gastrointestinal tract, or infectious disease such as ALDS or malaria. Antagonists to the proteins can be used for treating e.g. asthma, chronic obstructive pulmonary disease, cystic fibrosis, sinusitis, rhinitis, atherosclerosis, glomerulonephritis, multiple sclerosis, inflammatory bowel disease, carthitis or adult respiratory distress syndrome. Infections such as parasitic infections may also be treated with a molecule that inhibits contains on the contains and the conta
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                            monocyte chemotactic protein 4 (MCP-4) Bac I variant, which can be used to treat patients deficient in Ck betal0, while a Ck betal0 and aniagonist can be used to reduce excessive levels of Ck betal0. Ck betal0 can be used to treat leukaemia, solid tumours, chronic or opportunistic infections, autoimmune diseases, asthma, fibrotic diseases, psoriasis and neurodegenerative diseases. It also promotes wound healing, regulates haematopoiesis and generates antibodies. Labelled Ck betal0 can be used to identify its cognate receptor, while cells expressing the receptor can be used to screen compounds for (art)agonist activity. The antiaponist can be used to treat rheumatoid arthritis, autoimmune, chronic inflammatory or infectious diseases, allergies, prostaglandin dependent fever and infectious diseases, silicosis, sarcoidosis, hyper-eosinophilic syndrome, lung inflammation and atherosclerosis. Ck betal0 cDNA can diffication.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps

Claim 1, Fig 2; 83pp; English.

The present sequence is human chemokine betal0 (CK betal0) or monocyte chemotractic protein 4 (McP-4), which can be used to treat patients deficient in CK betal0, while a CK betal0 antagonist can be used to reduce excessive levels of CK betal0. CK betal0 can be used to reduce excessive levels of CK betal0. CK betal0 can be used to treat leukaemia, solid tumours, chronic or opportunistic infections, autoimmune diseases, asthma, fibrotic diseases, poriasis and neurodegenerative diseases. It also promotes wound chealing, regulates haematopoiesis and generates antibodies.

Labelled CK betal0 can be used to identify its cognate receptor, while cells expressing the receptor can be used to screen compounds for (ant)agonist activity. The antagonist can be used to treat rheumatoid arthritis, autoimmune, chronic inflammatory or infectious diseases, allergies, prostaglandin dependent fever and bone marrow failure, silicosis, sarcoidosis, hyper-eosinophilic syndrome, lung inflammation and atherosclerosis. CK betal0 cDNA can be used to isolate genes encoding similar peptides, in gene therapy and for chromosome identification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    profein 4 - useful to treat tumours, autoimmune disease, infection, asthma and fibrosis
                            19-MAR-1998 (first entry)
Human chemokine betal0 or monocyte chemotactic protein 4.
Human; chemokine betal0; Cx betal0; treatment; antagonist;
solid tumour; infection; autoimmune disease; asthma; antibody;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Polypeptide encoding chemokine beta 4 and monocyte chemotactic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ٥;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  chemokine; inhibitor; antilinflammatory; atherosclerosis; Crohn's disease; arthritis; anglogenesis; tumour; metastasis; therapy; diagnosis; medical imaging.

This polypeptide comprises human macrophage-derived monocyte chemotactic protein-5 (MCP-5), a novel C-C chemokine. Its amino acid sequence was deduced from a cDNA clone (see T90880 and T90883) isolated from a human macrophage cDNA colorises culturing a host cell that is stably transformed or transfected with MCP-5 polynucleotide. Also claimed acts or transfected with MCP-5 polynucleotide. Also claimed is a hybridoma that produces a monoclonal antibody (MAD) that is specifically reactive with the mature MCP-5 (Or its analogues and fragments) is used to enhance the immune response in cases of required as anti-inflammatories in cases of e.g. the MAD) are useful as anti-inflammatories in cases of e.g. arthritis and crohn's disease, also for treatment of atherosclerosis, angiogenesis and tumour growth (or metastasis). The MCP-5 inhibitors can possibly also be used to reduce the damaging effects of chemo- and radio-therapy on myeloid progenitor cells, and to inhibit replication of HIV. MCP-5 can also be used to identify the creeptors) are used to modulate MCP-5 agonists and antagonists.

A novel human chemokine, CK beta-10 (R93087), was identified as the product of a cDNA clone (T17050) isolated from a 9-wk early the product of a cDNA library. The protein is structurally related to the chemokine family. Recombinant Ck beta-10 can be obtd. by incorporating the cDNA into a vector and expression of the protein

receptor. The analogue is useful as an anti-inflammatory agent to block the effects of MCP-1 which is an inflammatory mediator causing migration of monocytes and other cells e.g. basophils and lymphocytes into inflammatory diseases. MCP-1 has been implicated in allergic and chronic inflammatory diseases e.g. arthritis, arteriosclerosis and several lung diseases. The analogue competes more effectively with MCP-1 for binding MCP-1 receptors than prior art mutant versions of MCP-1 e.g. preferably providing 50% inhibition of binding at a 25:1 ratio or less, compared with 75:1 for prior art mutant 7ND.
                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present sequence represents an analogue, MCP-1 (10-76), of monocyte chemoattractant protein-1 (MCP-1). The analogue, which lacks the N-terminal amino acids 1-9 of MCP-1, acts as an antagonist of MCP-1 as it lacks MCP-1 biological activity and inhibits binding to a MCP-1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
in e.g. E. coli, COS or Sf9 cells. Ck beta-10 can be used to treat solid tumours, chronic infections, psoriasis, asthma and allergy, to regulate haematopoiesis, promote wound healing, and to inhibit angiogenesis. It can also be used to inhibit bone marrow stem cell colony formn. during chemotherapy.
                                                                                                                                                                                                                                                                                                   Gaps

The present sequence represents an analogue, MCP-1 (11-76), of monocyte chemoattractant protein-1 (MCP-1). The analogue, which lacks the chemoattractant protein-1 of MCP-1, acts as an antagonist of MCP-1 as it lacks MCP-1 biological activity and inhibits binding to a MCP-1 as it lacks MCP-1 biological activity and inhibits binding to a MCP-1 receptor. The analogue is useful as an anti-inflammatory agent to block the effects of MCP-1 which is an inflammatory mediator causing migration of monocytes and other cells e.g. basophils and lymphocytes into inflammatory diseases e.g. arthritis, arteriosclerosis and several lung diseases. The analogue competes more effectively with MCP-1 for binding diseases. The analogue competes more effectively with MCP-1 for binding MCP-1 receptors than prior art mutant versions of MCP-1 e.g. preferably with 75:1 for prior art mutant 7ND.

Sequence 67 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present sequence represents an analogue, MCP-1 (9-76), of monocyte chemoattractant protein-1 (MCP-1). The analogue, which lacks the Chemoattractant protein-1 (MCP-1). The analogue, which lacks the N-terminal amino acids 1-8 of MCP-1, acts as an antagonist of MCP-1 as it lacks MCP-1 biological activity and inhibits binding to a MCP-1 receptor. The analogue is useful as an anti-inflammatory agent to block the effects of MCP-1 which is an inflammatory mediator causing migration of monocytes and other cells e.g. basophils and lymphocytes into inflammation sites. MCP-1 has been implicated in allergic and chronic inflammatory diseases e.g. arthritis, arteriosclerosis and several lung diseases. The analogue competes more effectively with MCP-1 for binding MCP-1 receptors than prior art mutant versions of MCP-1 e.g. preferably with 75:1 for prior art mutant 7ND.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö

Monocyte chemoattractant protein-1 (MCP-1) derivatives are mutated such that they inhibit the monocyte chemoattractant activity of endogenous MCP-1, provided that the derivative has not been modified by the substitution of 28-Tyr by Leu and/or 30-Arg by Val. Preferred mutations are: (1) substitution of 28 Tyr by aspartate; (2) substitution of 24 Arg by Phe; (3) substitution of 3-Asp by Ala; and/or (4) deletion of amino acids 2-8. The present sequence is a specifically claimed human MCP-1 derivative based on the parent protein disclosed in Rollins, Molecular The peptides can be used to prevent restenosis, e.g. in patients Sequence 69 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps

swiss-prot37 1:swissprot Database:

Mean 25.241; Variance 32.618; scale 0.774

Statistics:

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

I FUNCTION: IN RESPONSE TO THE PRESENCE OF ALLERGENS, THIS PROTEIN DIRECTLY PROMOTES THE ACCUMULATION OF EOSINOPHILS, A PROMINENT FEATURE OF ALLERGIC INFLAMMATORY REACTIONS (BY SIMILARITY).

-! SENDELLULAR LOCATION: EXTRACELLULAR.

-! PTM: O-GLYCOSYLATED (PORDBABLE).

-! SIMILARITY: BELONGS TO THE INTERCRINE BETA FAMILY (SMALL CYTOKINE C-C) (CHEMOKINE CC).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps

EXP. MED. 185:99-109(1997).
-!- FUNCTION: CHEMOTACTIC FACTOR THAT ATTRACTS EOSINOPHILS, MONOCYTES, AND LYMPHOCYTES BUT NOT NEUTROPHILS. POTENT MONOCYTE ACTIVE
                                                                                                                                                                                                                                                                  -:- INDUCTION: BY LIPOPOLYSACCHARIDE (LPS).
-:- SIMILARITY: BELONGS TO THE INTERCRINE BETA FAMILY (SMALL CYTOKINE
                                                                                                                                                                         IN THE LUNG. A LOWER
                           expressed sequence tag databases.";
J. LEUKNOC. BIOL. 61:145-550(1997).
-1- FUNCTION: CHEMOTACTIC FACTOR THAT ATTRACTS LYMPHOCYTES BUT NOT
MONOCYTES OR GRANULOCYTES. MAY BE INVOLVED IN B CELL MIGRATION
INTO B CELL FOLLICLES IN LYMPH NODES.
-1- TISSUE SPECIFICITY: SPERESSED AT HIGH LEVELS IN THE LUNG. A LOWER
LEVEL EXPRESSION IS SEEN IN LYMPHOID TISSUES SUCH AS LYMPH NODES.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 GONZALO J.A., LLOYD C., KREMER L., LU L., MARTINEZ A.C.,

CHEMOKINE THAT SIGNALS THROUGH CCR2. INVOLVED IN ALLERGIC INFLAMMATION AND THE HOST RESPONSE TO PATHOGENS AND MAY PLAY A PLYOTAL ROLE DURING EARLY STRGES OF ALLERGIC LUNG INFLAMMATION.

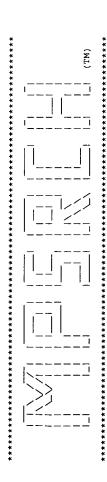

-!- SUBUNIT: HOMODIMER (BY SIMILARITY).

-!- TISSUE SPECIFICITY: PREDOMINANTLY EXPRESSED IN THE LYMPH NODES AND THYMUS, ALSO FOUND IN THE SALIVARY GLANDS CONTAINING LYMPH NODES, BREAST, HEART, LUNG, BRAIN, SMALL INTESTINE, KIDNEY AND COLON.

-!- INDUCTION: BY IFW-GAMMA AND LIPOPOLYSACCHARIDE (LPS).

-!- SIMILARITY: BELONGS TO THE INTERCRINE BETA FAMILY (SMALL CYTOKINE CC) (CHEMOXINE CC).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps

This protein is a polymorphonuclear leukocyles chemotactic factor
and is involved in the host defense function.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             #domain signal sequence #status predicted #label SIG\

                                                                                                                                                                                                                 Screening for cods. with anti-heparanase activity - by detecting inhibition of heparin or heparan sulphate degradation, potentially useful for treating arthritis, restenosis, cancer. Claim 13; Page 50; 60pp; English.

Purified heparanases, prepared under reducing conditions and activated with transglutaminase, are given in R70786-801. Most are prepared by reverse transcription of mRNA from activated human leukocytes, then cloning of the cDNA into pVil392 baculovirus vector, and expression in Sf9 cells in the presence of reduced glutathione and dithiothreitol.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New monocyte chemo:attractive cytokine - for treatment of cancer

The analogue, MCP-1 (10-76), of monocyte chemoattractant protein-1 (MCP-1). The analogue, which lacks the chemoattractant protein-1 (MCP-1). The analogue, which lacks the neterminal amino acids 1-9 of MCP-1, acts as an antagonist of MCP-1 as it lacks MCP-1 blological activity and inhibits binding to a MCP-1 receptor. The analogue is useful as an anti-inflammatory agent to block the effects of MCP-1 which is an inflammatory mediator causing migration of monocytes and other cells e.g. basophils and lymphocytes into inflammatory diseases e.g. arthritis, arteriosclerosis and several lung diseases. The analogue competes more effectively with MCP-1 for binding MCP-1 receptors than prior art mutant versions of MCP-1 e.g. preferably providing 50% inhibition of binding at a 25:1 ratio or less, compared
                                                                                                                                                                                                                                                        ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
2-myristate-3-acetate (see Q25259). The mature protein is claimed. It can be N-terminally deleted such that the mature protein starts at Val 3 or at Lys 19. The leader sequence is active in animal cells. See Q25258-Q25262.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    N-terminally truncated monocyte chemo:attractant protein-1 (MCP-1) lacks MCP-1 activity and inhibits receptor binding, useful as
